

track LOCK Protective Systems

FEATURES

- Hard coat anodized, billet aluminum mounting block
- Available for left hand and right hand applications
- Welded steel housing, powder coated
- Tool steel locking pin
- Heavy-duty release spring
- Accepts standard pad lock (not included)
- Mounts on door track
- Design and manufactured in the USA

track LOCK

Protective Systems

Traditional lock under pressure fails

track LOCK under pressure holds fast

The Allied Solutions track LOCK is a track mounted locking system that traps the roller. And, because track LOCK is not fastened to the door itself there's no chance of it jamming in the track like traditional slide locks. The track LOCK's heavy duty construction and corrosion resistant powder coating makes it the only lock that will outlast your door.

BENEFITS

- More secure than traditional slide locks, as the track LOCK traps the roller
- Does not ride up with the door, eliminating the lock from jamming in the radius of the track
- Pin will not bend, eliminating down time when slide lock cannot be opened
- Strong lateral spring action, positively removes the pin from moving parts of the door
- Built to last longer than your door, can be reused over and over.
- Coated housing, pin and latch prevents corrosion
- Never needs lubrication
- Lifetime Warranty
